

README

The file “**cognitive_test_results**” includes N=30,944 participants who started the cognitive test during the health screening in one of Airwave clinics.

The document “**Cognitive test summary var**” describes all outcome variables (for each test) reported in the cognitive_test_results file.

Columns *_TEST_ST indicate starting time of the test

Columns *_TEST_EN indicate ending time of the test

/*IMPORTANT*/

N=463 participants completed the test using a different version of the RQ (Quiz) test, which can be flagged in the data using the column RQ0. These data cover a period between Feb 2008 until June 2008 (see Table 1).

Unfortunately, no information is available on the differences between the two versions of the RQ test. Furthermore, those participants who did version RQ0 of the test don't have any information on starting time of the test for each test.

We decided to keep the data with all information available in the Airwave database and leave the researchers to decide the best way to deal with the issue.

Table 1

		Time when the TEST was in use [§]	
	Version	Start	End
RQ0	v1.4	19-Feb-08	05-Jun-08
RQ	v1.4.2	05-Jun-08	05-Jun-08
RQ	v1.4.3	31-Dec-04	10-Nov-14
RQ	v1.4.4	30-Mar-09	31-Mar-15

[§] Based on all participants in the database
