1 Introduction

This documentation describes the first version of the derived variables deposited on ELSA Wave 2 (2004 – 2005). There are a number of derived variables that have been deposited already, namely the Financial Derived Variables (Waves 1, 2 & 3), Pension Wealth Derived Variables (Wave 1 currently), and additionally within the Core Data: definitive age, year of birth and sex; financial unit type; letter cancellation task results; SOC and NS-SEC (Wave 0 and Wave 1 only); and highest educational qualification (Wave 1 only).

The variables have been derived on the latest version of the Wave 2 data available from the UK Data Archive (Wave 2 Core Data v3). If a derived variable is based on a variable that has not been archived then this has been indicated in the documentation.

In order to derive most of the variables in the Health section (“Ever Diagnosed...”) it was necessary to match in data (and respondents) from the Wave 1 archived dataset. This means that there are 12,207 respondents in the dataset rather than 9,432. Only those with a value of INWAVE of 2 or 3 (see page 13) will have values for variables outside of the Health section – you may wish to select out these cases only if you are not looking at the Health variables.

All information relevant to the derivation of each variable is provided in the format that is described below, with the variables first grouped into subject areas.

Variable Label: This is the label given to the variable. Derived variables can be distinguished from other variables by their labels, which always contain ‘(D)’ at the beginning. Note that the variable labels for all the derived variables are listed in the Contents Table (on the previous page), but that they do not include ‘(D)’ at the beginning (whereas they do in the actual dataset).

Variable Name: The name of the variable on the dataset.

Value Labels: These are the labels given to the different values that the data can take on the variable in question. Where there are no value labels (for example, on a continuous variable) this is indicated by ‘None’.

Missing Value Labels: These are the labels given to the values that are considered to be missing data. The standard missing values and their labels are as follows:

- 1 Not Applicable
- 8 Don’t Know
- 9 Refusal

Note that these are the same values as are used on the majority of the core ELSA data (with the exception of the self-completion module). On some derived variables these are not used, as there is no missing data (indicated by ‘None’), while on others there are additional categories of missing data.

Description of Variable: A brief description of the variable and any key issues to note. Any applicable background information or references will be included in this section.

Population: This defines whom the variable applies to and who should have a value for it.

On some variables, there are respondents to whom the variable applies but for whom the data is missing, usually due to item level non-response to the questions from which the variable is derived. These cases have a missing value that indicates why the data is missing e.g. -8 indicates it is missing due to a ‘Don’t Know’ response being given to the question.

Level: This indicates the level of the information given by the derived variable. For all of the variables in this dataset, the level is 'individual'.

Derivation:

SPSS Code:

This section provides the SPSS code used to derive and format the variable and assign variable and value labels.

Note: Before running the SPSS code it is crucial to ensure that the missing values are not declared (i.e. missing values are turned off) for all the variables used in the derivation. After the code has been run, these missing values must be re-declared as missing (turned on) for the variables used in the derivation and for the resulting derived variable.

This is because SPSS will not recognise the values of variables if they are declared missing. **The code for this is not supplied for each individual derivation.** The command enclosed in quotation marks should be used to turn off missing values: "missing values *varname* ()." and the following command will turn them back on again "missing values *varname* (-9 thru -1)."

2 Household Demographics

Number of Natural Children Outside Household

Variable name: CHONAT

Value labels: None

Description of variable:

This variable gives the number of natural children a respondent has outside the household.

Population: All respondents

Level: Individual

Derivation:

```
numeric chonat (f2.0).
do if perid=1.
count chonat=dhcr01 dhcr17 dhcr33 dhcr49 dhcr65 dhcr81 dhcr97 dhcr113
dhcr129 dhcr145 dhcr161 dhcr177 dhcr193 dhcr209(3).
end if.
do if perid=2.
count chonat=dhcr02 dhcr18 dhcr34 dhcr50 dhcr66 dhcr82 dhcr98 dhcr114

end if.
variable labels chonat '(D) Number of natural children outside the
household'.
execute.
```

Number of Adopted Children Outside the Household

Variable name: CHOADP

Value labels: None

Description of variable:

This variable gives the number of adopted children a respondent has outside the household.

Population: All respondents

Level: Individual

Derivation:

```
numeric choadp (f2.0).
do if perid=1.
count choadp=dhcr01 dhcr17 dhcr33 dhcr49 dhcr65 dhcr81 dhcr97 dhcr113
dhcr129 dhcr145 dhcr161 dhcr177 (4).
end if.
do if perid=2.
count choadp=dhcr02 dhcr18 dhcr34 dhcr50 dhcr66 dhcr82 dhcr98 dhcr114
dhcr130 dhcr146 dhcr162 (4).
end if.
do if perid=3.

end if.
do if perid=8.
count choadp=dhcr08 dhcr24 dhcr40 dhcr56 dhcr72 dhcr88 dhcr104 (4).
end if.
variable labels choadp "(D) Number of adopted children outside the
household".
execute.
```

Number of Foster Children Outside the Household

Variable name: CHOFST

Value labels: None

Description of variable:

This variable gives the number of foster children the respondent has outside the household.

Population: All respondents

Level: Individual

Derivation:

```
numeric chofst (f2.0).
do if perid=1.
count chofst=dhcr01 dhcr17 dhcr33 dhcr49 dhcr65 dhcr81 dhcr97 dhcr113
dhcr129 dhcr145 dhcr161 dhcr177 dhcr193 (5).
end if.
do if perid=2.
count chofst=dhcr02 dhcr18 dhcr34 dhcr50 dhcr66 dhcr82 dhcr98 dhcr114
dhcr130 dhcr146 dhcr162 (5).
end if.
do if perid=3.
count chofst=dhcr03 dhcr19 dhcr35 dhcr51 dhcr67 dhcr83 dhcr99 dhcr115
dhcr131 (5).
end if.
do if perid=4.
count chofst=dhcr04 dhcr20 dhcr36 dhcr52 dhcr68 dhcr84 dhcr100 dhcr116
dhcr132 (5).
end if.
do if perid=5.
count chofst=dhcr05 dhcr21 dhcr37 dhcr53 dhcr69 dhcr85 dhcr101 dhcr117
dhcr133 (5).
end if.
do if perid=6.
count chofst=dhcr06 dhcr22 dhcr38 dhcr54 dhcr70 dhcr86 dhcr102 (5).
end if.
do if perid=7.
count chofst=dhcr07 dhcr23 dhcr39 dhcr55 dhcr71 dhcr87 dhcr103 (5).
end if.
do if perid=8.
count chofst=dhcr08 dhcr24 dhcr40 dhcr56 dhcr72 dhcr88 dhcr104 (5).
end if.
variable labels chofst "(D) Number of foster children outside the
household".
execute.
```

Number of Stepchildren Outside the Household

Variable name: CHOSTP

Value labels: None

Description of variable:

This variable gives the number of stepchildren a respondent has outside the household.

Population: All respondents

Level: Individual

Derivation:

```
numeric chostp (f2.0).
do if perid=1.
count chostp=dhcr01 dhcr17 dhcr33 dhcr49 dhcr65 dhcr81 dhcr97 dhcr113
dhcr129 dhcr145 dhcr161 dhcr177 dhcr193 (6).
end if.
do if perid=2.
count chostp=dhcr02 dhcr18 dhcr34 dhcr50 dhcr66 dhcr82 dhcr98 dhcr114
dhcr130 dhcr146 dhcr162 (6).
end if.
do if perid=3.

dhcr131 (6).
end if.
do if perid=4.
count chostp=dhcr04 dhcr20 dhcr36 dhcr52 dhcr68 dhcr84 dhcr100 dhcr116
dhcr132 (6).
end if.
do if perid=5.
count chostp=dhcr05 dhcr21 dhcr37 dhcr53 dhcr69 dhcr85 dhcr101 dhcr117
dhcr133 (6).
end if.
do if perid=6.
count chostp=dhcr06 dhcr22 dhcr38 dhcr54 dhcr70 dhcr86 dhcr102 (6).
end if.
do if perid=7.
count chostp=dhcr07 dhcr23 dhcr39 dhcr55 dhcr71 dhcr87 dhcr103 (6).
end if.
do if perid=8.
count chostp=dhcr08 dhcr24 dhcr40 dhcr56 dhcr72 dhcr88 dhcr104 (6).
end if.
variable labels chostp "(D) Number of stepchildren outside the
household".
execute.
```

Total Number of Children Outside the Household

Variable name: CHOTOT

Value labels: None

Description of variable:

This variable gives the total number of children the respondent has outside the household.

Population: All respondents

Level: Individual

Derivation:

```
numeric chotot (f2.0).  
compute chotot= chonat + choadp + chofst + chostp .  
variable labels chotot "(D) Total number of children outside the  
household".  
execute.
```

Number of Natural Children Inside the Household

Variable name: CHINAT

Value labels: None

Description of variable:

This variable gives the number of natural children the respondent has in the household.

Number of Adopted Children Inside the Household

Variable name: CHIADP

Value labels: None

Description of variable:

This variable gives the number of adopted children the respondent has in the household.

Number of Foster Children Inside the Household

Variable name: CHIFST

Value labels: None

Description of variable:

This variable gives the number of foster children the respondent has in the household.

Number of Stepchildren Inside the Household

Variable name: CHISTP

Value labels: None

Description of variable:

This variable gives the number of stepchildren the respondent has in the household.

Total Number of Children Inside the Household

Variable name: CHITOT

Value labels: None

Description of variable:

This variable gives the total number of children the respondent has in the household.

Population (for all of the above): All respondents **Level (for all of the above):** Individual

Derivation: The syntax below is for all the five variables above.

```
numeric chinat chiadp chifst chistp chitot (f2.0).
count chinat = dhr dhr2 dhr3 dhr4 dhr5 dhr6 dhr7 dhr8 dhr9 dhr10 dhr11
dhr12 (8).
count chiadp = dhr dhr2 dhr3 dhr4 dhr5 dhr6 dhr7 dhr8 dhr9 dhr10 dhr11
dhr12 (9).
count chifst = dhr dhr2 dhr3 dhr4 dhr5 dhr6 dhr7 dhr8 dhr9 dhr10 dhr11
dhr12 (10).
count chistp = dhr dhr2 dhr3 dhr4 dhr5 dhr6 dhr7 dhr8 dhr9 dhr10 dhr11
dhr12 (11).
compute chitot= chinat + chiadp + chifst + chistp .
variable labels chinat "(D) Number of natural children inside the
household".
variable labels chiadp "(D) Number of adopted children inside the
household".
variable labels chifst "(D) Number of foster children inside the
household".
variable labels chistp "(D) Number of stepchildren inside the
household".
variable labels chitot "(D) Total number of children inside the
household".
execute.
```

Total Number of Children (In and Out of Household)

Variable name: ALLTOTCH

Value labels: None

Description of variable:

This variable gives the total number of children the respondent has both inside and outside the household.

Total Number of Natural Children (In and Out of Household)

Variable name: ALLNATCH

Value labels: None

Description of variable:

This variable gives the total number of natural children the respondent has both inside and outside the household.

Total Number of Adopted Children (In and Out of Household)

Variable name: ALLADCH

Value labels: None

Description of variable:

This variable gives the total number of adopted children the respondent has both inside and outside the household.

Total Number of Foster Children (In and Out of Household)

Variable name: ALLFSCH

Value labels: None

Description of variable:

This variable gives the total number of foster children the respondent has both inside and outside the household.

Total Number of Stepchildren (In and Out of Household)

Variable name: ALLSPCH

Value labels: None

Description of variable:

This variable gives the total number of stepchildren the respondent has both inside and outside the household.

Population (for all of the above): All respondents **Level (for all of the above):** Individual

Derivation: The syntax below is for all the five variables above.

```
numeric alltotch allnatch alladch allfsch allspch (f2.0).
compute alltotch= chotot + chitot.
compute allnatch= chonat + chinat.
compute alladch= choadp + chiadp.
compute allfsch= chofst + chifst.
compute allspch= chostp + chistp.
variable labels alltotch "(D) Total number of children (in and out of
household)".
variable labels allnatch "(D) Total number of natural children (in and
out of household)".
variable labels alladch "(D) Total number of adopted children (in and
out of household)".
variable labels allfsch "(D) Total number of foster children (in and
out of household)".
variable labels allspch "(D) Total number of step children (in and out
household)".
execute.
```

Whether Natural Mother is Still Alive

Variable name: MOTHER

Value labels:

- 1 Mother alive
- 2 Mother dead

Description of variable:

This variable shows whether a respondent's natural mother was alive at the time of the Wave 2 interview.

Population: All respondents **Level:** Individual

Derivation: This variable was derived by combining the data that was fedforward into the Wave 2 interview (FFDINMAD, not archived) as well as the answers given in the Wave 2 interview (for those who said their mother was alive previously or had not answered the question before), and whether their mother was present in the household (MAINHH1).

Note that for this variable and the three that follow it was necessary to recode some individual values. Details of this are not given in the syntax.

```

numeric mother (f2.0).
compute mother=dinma.
if dinma=-1 and mainhh1=1 mother=1.
if dinma=-1 and mainhh1~=1 mother=ffdinmad.
variable labels mother '(D) Whether natural mother is still alive'.
value labels mother 1 "Mother alive" 2 "Mother dead" -8 "Don't know"
-9 "Refusal".
execute.

```

Natural Mother's Age (or Estimated Age) at Death

Variable name: MTHAGD

Value labels:

-5 Inaccurate response (age given under 12 years old)

Description of variable:

This variable shows the age of death of the natural mother of the respondent, if she has died.

Population: All respondents whose mother has died

Level: Individual

Derivation: This variable was derived by combining the data that was fedforward into the Wave 2 interview (FFDIMADD, not archived) as well as the answers given in the Wave 2 interview (for those who said their mother had died at Wave 2 or whose answer was missing before).

As with the data on age of mother's death in the archived Wave 2 dataset (DIMAD), the ages deemed to be too young to be accurate answers have been re-coded to a value of -5.

```

numeric mthagd (f3.0).
compute mthagd=dimad.
if dimad=-1 mthagd=ffdimadd.
variable labels mthagd "(D) Natural mother's age (or estimated age) at
death".
recode mthagd (0 thru 11=-5).
execute.
value labels mthagd -1 'Not applicable' -5 'Inaccurate response (age
given under 12 years old)' -8 "Don't know" -9 'Refused'.

```

Whether Natural Father is Still Alive

Variable name: FATHER

Value labels:

- 1 Father alive
- 2 Father dead

Description of variable:

This variable shows whether a respondent's natural mother was alive at the time of the Wave 2 interview.

Population: All respondents

Level: Individual

Derivation: This variable was derived by combining the data that was fedforward into the Wave 2 interview (FFDINFAD, not archived) as well as the answers given in the Wave 2 interview (for those who said their father was alive previously or had not answered the question before), and whether their mother was present in the household (PAINHH1).

```
numeric father (f2.0).
compute father=dinfa.
if dinfa=-1 and painhh1=1 father=1.
if dinfa=-1 and painhh1~=1 father=ffdinfad.
execute.
variable labels father '(D) Whether natural father is still alive'.
value labels father 1 "Father alive" 2 "Father dead" -8 "Don't know"
-9 "Refusal".
```

Natural Father's Age (or Estimated Age) at Death

Variable name: FTHAGD

Value labels:

-5 Inaccurate response (age given under 12 years old)

Description of variable:

This variable shows the age of death of the natural father of the respondent, if he has died.

Population: All respondents whose father has died

Level: Individual

Derivation: This variable was derived by combining the data that was fedforward into the Wave 2 interview (FFDIFADD, not archived) as well as the answers given in the Wave 2 interview (for those who said their father had died at Wave 2 or whose answer was missing before). As with the data on age of father's death in the archived Wave 2 dataset (DIFAD), the ages deemed to be too young to be accurate answers have been re-coded to a value of -5.

```
numeric fthagd (f3.0).
compute fthagd=difad.
if difad=-1 fthagd=ffdifadd.
variable labels fthagd "(D) Natural father's age (or estimated age) at
death".
recode fthagd (0 thru 11=-5).
execute.
value labels fthagd -1 'Not applicable' -5 'Inaccurate response (age
given under 12 years old)' -8 "Don't know" -9 'Refused'.
```

3 Health

Many of the derived variables in this section give cumulated information regarding whether a respondent has ever reported a diagnosed disease or condition. The codes indicate in which wave the condition was first reported. It is important to note that respondents may give a date of diagnosis prior to an earlier interview. Therefore, for example, "By Wave 1" should be interpreted as "Reported by Wave 1" rather than "Diagnosed by Wave 1".

These variables do not necessarily indicate that a respondent still has a particular condition, just that they have reported it.

Categories where values were not consistent between Wave 1 and Wave 2 have been excluded from the derivations below.

There are two variables for diagnosed diabetes – one including those respondents who reported high blood sugar but not diabetes and one excluding those respondents.

There are a small number of cases who have missing values (i.e. -1, -8 or -9) for either wave's source variables. These cases usually either responded at the 'other' wave or have been coded -3 or -2 in the derived variables.

Whether Respondent was in Wave 1, Wave 2 or both

Variable name: INWAVE

Value labels:

- 1 Wave 1 only
- 2 Wave 2 only
- 3 Both waves

Description of variable:

This variable shows whether a respondent is present in the archived data sets for Wave 1, Wave 2 or both.

Population: All respondents

Level: Individual

Derivation: This variable was derived by combining the Wave 1 and Wave 2 archived Core datasets and then looking at who was in each. A dummy variable with a value of 1 for each respondent in each wave was computed (INWAVE1 for Wave 1, INWAVE2 for Wave 2, neither archived) for all cases in each dataset before combining the datasets together.

```
NUMERIC inwave (F2.0).
IF inwave1 = 1 AND inwave2 = 1 inwave = 3.
IF inwave1 = 1 AND SYSMIS(inwave2) inwave = 1.
IF SYSMIS(inwave1) AND inwave2 = 1 inwave = 2.
VAR LAB inwave 'Whether respondent was in Wave 1, Wave 2 or both'.
VAL LAB inwave
1 'Wave 1 only'
2 'Wave 2 only'
3 'Both waves'.
```

Ever Reported High Blood Pressure (Diagnosed)

Variable name: HEDIMBP

Value labels:

- 3 In Wave 1 only and did not report
- 2 In Wave 2 only and did not report
- 0 Neither wave
- 1 By Wave 1
- 2 By Wave 2

Description of variable:

This variable shows whether a respondent has ever reported high blood pressure and if so, by which wave.

Population: All respondents

Level: Individual

Derivation: Datasets for Waves 1 and 2 were merged and the variable names from Wave 1 prefixed with b and those from Wave 2 prefixed with c. The variables BHEDIM01-BHEDIM07, CHEDIM01-CHEDIM08 and INWAVE were used in this derivation.

```
NUMERIC hedimbp (F2.0).
DO IF bhedim01 ~= 1 AND bhedim02 ~= 1 AND bhedim03 ~= 1 AND bhedim04 ~=
1 AND bhedim05 ~= 1 AND bhedim06 ~= 1 AND bhedim07 ~= 1 AND chedim01 ~=

Ever Reported Hedibonic Lung Disease (Diagnosed)

Variable name: HEDIBLU

Value labels:

-3 In Wave 1 only and did not report
-2 In Wave 2 only and did not report
0 Neither wave
1 By Wave 1
2 By Wave 2

Description of variable:

This variable shows whether a respondent has ever reported hedibonic lung disease (chronic lung disease such as chronic bronchitis or emphysema) and if so, by which wave.

Population: All respondents

Level: Individual

Derivation: Datasets for Waves 1 and 2 were merged and the variable names from Wave 1 prefixed with b and those from Wave 2 prefixed with c. The variables BHEDIB01-BHEDIB10, CHEDIB01-CHEDIB04 and INWAVE were used in this derivation.

Physical Activity Summary

Variable name: PALEVEL

Value labels:

- 8 Not known
- 1 Not applicable
- 0 Sedentary
- 1 Low
- 2 Moderate
- 3 High

Description of variable:

This variable summarises the answers to the level of work activity (WPJACT) in the work and pensions section and three questions on physical activity “in daily life” in the health section (HEACTA - HEACTC). It approximates as closely as possible the classification used in the Allied Dunbar Survey of Fitness.

Reference

Activity and Health Research (1992) *Allied Dunbar National Fitness Survey: main findings*, London: Sports Council and Health Education Authority.

Levels used in this variable are defined as follows

- Sedentary: Not working or sedentary occupation, engages in mild exercise 1–3 times a month or less, with no moderate or vigorous activity.
- Low: Standing occupation, engages in moderate leisure-time exercise once a week or less and no vigorous activity; OR engages in mild leisure-time activity at least 1–3 times a month, moderate once a week or less and no vigorous; OR has a sedentary or no occupation and engages in moderate leisure-time activity once a week or 1–3 times a month, with no vigorous activity.
- Moderate: Does physical work; OR engages in moderate leisure-time activity more than once a week; OR engages in vigorous activity once a week to 1–3 times a month.
- High: Heavy manual work or vigorous leisure activity more than once a week.

Population: All respondents

Level: Individual

Maximum Alcohol Units in a Day Last Week

Variable name: MAXALC

Value labels:

- 8 Not known
- 1 Not applicable
- 5 No drinks last week
- 4 No drinks last year

Description of variable:

This variable gives the number of alcohol units consumed on the heaviest day's drinking in the week prior to interview. Respondents were first asked how often they drank alcohol in the previous

12 months, then the frequency in the previous week, then the amounts of different types of drink on the heaviest day in that week. The answers for specific drinks are converted as follows:

- 1 pint normal beer = 2 units
- 1 large can or bottle normal beer = 1.5 units
- 1 small can or bottle normal beer = 1 unit
- 1 pint strong beer = 3 units
- 1 large can or bottle strong beer = 2.25 units
- 1 small can or bottle normal beer = 1.5 units
- 1 glass spirits = 1 unit
- 1 glass sherry = 1 unit
- 1 glass wine = 1 unit
- 1 small can or bottle alcopops = 1 unit

Respondents were asked to count a double of spirits as two drinks.

Note: High values may be mis-recorded and reflect weekly rather than daily consumption; these have not been removed as there was no direct means of verifying this.

This variable is set to 'Not known' if any of the quantity variables are blank.

Population: All respondents

Level: Individual

Derivation:

```

Maximum Alcohol Units in a Day Last Week

Variable name: MAXALC2

Value labels:

- 8 Not known
- 1 Not applicable
- 5 No drinks last week
- 4 No drinks last year

Description of variable:

This variable gives the number of alcohol units consumed on the heaviest day's drinking in the week prior to interview. Respondents were first asked how often they drank alcohol in the previous 12 months, then the frequency in the previous week, then the amounts of different types of drink on the heaviest day in that week. The answers for specific drinks are converted as follows:

- 1 pint normal beer = 2 units
- 1 large can or bottle normal beer = 1.5 units
- 1 small can or bottle normal beer = 1 unit
- 1 pint strong beer = 3 units
- 1 large can or bottle strong beer = 2.25 units
- 1 small can or bottle normal beer = 1.5 units
- 1 glass spirits = 1 unit
- 1 glass sherry = 1 unit

1 glass wine = 1 unit
1 small can or bottle alcopops = 1 unit

Respondents were asked to count a double of spirits as two drinks.

Note: High values may be mis-recorded and reflect weekly rather than daily consumption; these have not been removed as there was no direct means of verifying this.

This variable assigns a quantity if a participant reported drinking beer but then gave information on only one or two of the three quantity variables (pints, large cans, small cans), e.g. it assumes that they only drank pints if they reported a quantity for this and left quantities for large and small cans blank.

Edinburgh Claudication

Variable name: CLAUD

Value labels:

- 8 Not known
- 2 Cannot/never walk
- 1 Not applicable
- 0 None
- 1 Grade 1
- 2 Grade 2

Description of variable:

This variable gives the summary value for the Edinburgh claudication scale, which relies on report of symptoms. To qualify as having claudication a respondent has to i) experience pain or discomfort on walking ii) not get it when standing still or sitting iv) the pain disappears in 10 minutes or less when stop v) experience the pain in the calf. Grade 1 applies if experiences the pain when walking uphill or when in a hurry; grade 2 applies if experiences the pain when walking at an ordinary pace on level ground.

Breathlessness, MRC Respiratory Questionnaire

Variable name: BRETHS

Value labels:

-9 Refused
-8 Don't know
-2 Cannot/never walk
-1 Not applicable
0 None

- 1 Grade 1
- 2 Grade 2
- 3 Grade 3

Description of variable:

This variable gives the summary value for the MRC respiratory questionnaire, which relies on report of symptoms of breathlessness or dyspnoea. To qualify as being breathless a respondent has to experience being out of breath on exertion. Grade 1 applies if experiences the breathlessness when walking up a slight hill or when in hurrying on the level; Grade 2 applies if experiences the breathlessness when walking at own pace on level ground; Grade 3 applies if has to stop when feeling breathlessness while walking at own pace on the level. Grade 3 coding takes priority over the other codes. Code -2 is only used if have not been coded as Grade 2 or Grade 3 and answers “never” or “cannot” walk at one of the other questions.

The dyspnoea aspects of the MRC respiratory questionnaire are recommended by the National Institute for Clinical Excellence for use as one element in diagnosing Chronic Obstructive Airways Disease.

Phlegm, MRC Respiratory Questionnaire

Variable name: PHLEGM

Value labels:

-8 Not known
-1 Not applicable
0 None or not regular
1 First thing in winter
2 Other

Description of variable:

This variable gives the summary value for the MRC respiratory questionnaire, which relies on report of symptoms of phlegm or sputum production. Code 1 includes those who usually bring up phlegm from the chest first thing in winter and bring up phlegm on most days for as much as 3 months in the year. Code 2 applies to those who answered 'no' to bringing up phlegm first thing but yes to bringing up phlegm from the chest during day or night in winter and say they bring up phlegm most days for as much as 3 months in the year. Code 0 includes those who satisfy only one of the two criteria needed for Code 1 or for Code 2.

Population: All respondents

Level: Individual

Derivation:

Number of Letters Missed Recoded for Executive Function Index

Variable name: NNMISRC

Value labels:

- 1 Not applicable
- 1 9+ missed
- 2 6-8 missed
- 3 4-5 missed
- 4 3 missed
- 5 2 missed
- 6 0-1 missed

Description of variable:

This new variable is NNMISSE recoded into groups to give a score from 1 to 6 so that it can be used to create the Executive Function Index.

Population: All respondents

Level: Individual

Derivation:

```
NUMERIC nnmisrc (F2.0).
RECODE nnmisse
  (-1=-1) (0 thru 1=6) (2=5) (3=4) (4 thru 5=3) (6 thru 8=2) (9
thru Highest=1) INTO nnmisrc .
EXECUTE .
VARIABLE LABELS nnmisrc '(D) Number of letters missed recoded for
Executive Function Index'.
VALUE LABELS nnmisrc
  1 "9+ missed"
  2 "6-8 missed"
  3 "4-5 missed"
  4 "3 missed"
  5 "2 missed"
  6 "0-1 missed"
  -1 "Not applicable".
EXECUTE .
```

Number of Items Completed Recoded for Executive Function Index

Variable name: CFSPEED

Value labels:

- 1 Not applicable
- 1 1-174 items completed
- 2 175-249 items completed
- 3 250-274 items completed
- 4 275-299 items completed
- 5 300-324 items completed
- 6 325-399 items completed
- 7 400-449 items completed
- 8 450+ items completed

Description of variable:

This new variable is NROWCL recoded into groups to give a score from 1 to 8 so that it can be used to create the Executive Function Index.

Note that the variables NROWCL was named NROWCLM in Wave 1.

Population: All respondents

Level: Individual

Derivation:

```

NUMERIC cfspeed (F2.0).
RECODE nrowcl
(-1=-1) (1 thru 174=1) (175 thru 249=2) (250 thru 274=3) (275 thru
299=4) (300 thru 324=5) (325 thru 399=6) (400 thru 449=7) (450 thru
Highest=8) INTO cfspeed.
EXECUTE .
VARIABLE LABELS cfspeed '(D) Number of items completed recoded for
Executive Function Index'.
VALUE LABELS cfspeed
  1 "1-174 items completed"

7 Socio-Economic Features

Whether New NS-SEC Code Was Assigned at ELSA Wave 2

Variable name: W2SEC

Value labels:

0 No new NS-SEC code

1 New NS-SEC code

Description of variable:

This variable shows whether the respondent was assigned a new NS-SEC code at Wave 2 or not by checking whether the NS-SEC code at Wave 2 is non-negative (NSSEC, not archived – see W2NSSEC).

Population: All respondents

Level: Individual

Derivation:

```
COMPUTE w2sec = 0.  
IF nssec >= 0 w2sec = 1.  
variable label w2sec "(D) Whether new NS-SEC code was assigned at ELSA  
Wave 2".  
value labels w2sec 0 "No new NS-SEC code" 1 "New NS-SEC code".
```

Whether New SIC Code Was Assigned at ELSA Wave 2

Variable name: W2SIC

Value labels:

0 No new SIC code

1 New SIC code

Description of variable:

This variable shows whether the respondent was assigned a new SIC92 code at Wave 2 or not by checking whether the SIC92 code at Wave 2 is non-negative (SIC92, not archived).

Population: All respondents

Level: Individual

Derivation:

```
compute w2sic=0.  
if sic92>=0 w2sic=1.  
variable label w2sic "(D) Whether new SIC code was assigned at ELSA  
Wave 2".  
value labels w2sic 0 "No new SIC code" 1 "New SIC code".
```

Whether New SOC Code Was Assigned at ELSA Wave 2

Variable name: W2SOC

Value labels:

- 0 No new SOC code
- 1 New SOC code

Description of variable:

This variable shows whether the respondent was assigned a new SOC2000 code at Wave 2 or not by checking whether the SOC2000 code at Wave 2 is non-negative. ESOC2000 is used, which is the 2-digit version of the 4-digit SOC200 code assigned at Wave 2. The latter has not been archived as it is considered disclosive, but is available on request from NatCen. Please see Section 8 for contact details.

Population: All respondents

Level: Individual

Derivation:

```

- 13.3 Routine technical
- 13.4 Routine operative
- 13.5 Routine agricultural
- 14.0 Never worked
- 15.0 Full-time students
- 16.0 Occupations not stated or inadequately described
- 17.0 Not classifiable for other reasons

Description of variable:

This variable gives the final NS-SEC code for each respondent at Wave 2 (including unclassifiable and non-workers). This variable is derived using a combination of Wave 1 NS-SEC (W1NSSEC, derived itself from the variables ANSSEC and ENSSEC, which were archived at Wave 1) and Wave 2 NS-SEC (NSSEC, not archived), because if a respondent had already been asked questions pertaining to their NS-SEC prior to Wave 2 and their circumstances had not changed at Wave 2 then they would have a missing value of NSSEC.

Also used in the derivation are the variables WPACTW and WPEVER.

Population: All respondents

Level: Individual

Derivation:

```
if w2sec=1 w2nssec=nssec.
if w2sec=0 w2nssec=w1nssec.
EXECUTE.
DO IF w2sec=0 AND SYSMIS(w1nssec) AND SYSMIS(nssec).
COMPUTE w2nssec = -1.
END IF.
execute.
DO IF w2sec=0 AND SYSMIS(w1nssec) AND nssec = -9.
COMPUTE w2nssec = -1.
END IF.
execute.
if wpactw=4 and w2nssec=-1 and wpever = 2 w2nssec = 14.0.
execute.
